#### *External Data Resources*

- 2011 Garbarski, Dana, Nora Cate Schaeffer, and Jennifer Dykema, "Measurement of Self-Reported Health." Winning proposal in Research Triangle Institute's 2012 Research Challenge. Data to be provided by GfK's Knowledge Panel. The project examines whether the validity of self-reported health is improved by varying question context and the ordering of the response options. The experiment contributes to research on survey methodology, health outcomes and disparities, and any field interested in capturing indicators of health in their surveys.
- 2011 Schaeffer, Nora Cate and Jennifer Dykema, "Agree-Disagree versus Construct Specific Items for Measuring Political Efficacy." General Social Survey (GSS) Open Module Competition. Split-ballot experiment accepted fall 2011 for implementation in three waves of GSS Panel beginning in 2012.
- 2012 Garbarski, Dana, Nora Cate Schaeffer, and Jennifer Dykema, "Measurement of Self-Reported Health." Open competition for module in Time-Sharing Experiments in the Social Sciences (TESS). TESS will provide data to study reporting of self-reported health in a self-administered (web) mode. The project examines whether the validity of self-reported health is improved by varying question context and the ordering of the response options. The experiment contributes to research on survey methodology, health outcomes and disparities, and any field interested in capturing indicators of health in their surveys.
- 2014 Garbarski, Dana, Nora Cate Schaeffer, and Jennifer Dykema. "Examining the Validity of Interviewers' Ratings of Respondents' Health." This proposal was accepted in an open competition for the Innovation Panel Competition, 2014, for Wave 8 of that face-to-face survey. This project examines the validity of interviewers' ratings of respondents' general health status with an experiment that varies when in a face-to-face interview the interviewer is asked to rate the respondent's health: at the beginning of the interview before any substantive questions are asked or at the end of interview. For telephone interviews (if administered), the interviewer's rating of the respondent's health will occur at the end of the interview to allow for a comparison to this circumstance in which interviewers are not able to observe physical cues.
- 2015 Garbarski, Dana, Nora Cate Schaeffer, and Jennifer Dykema, "Interviewers' Ratings of Respondents' Health" (General Social Survey). The GSS accepted this proposal for an experiment involving interviewers' ratings of respondents' health for the 2016 GSS. The interviewer is asked the following question during the GSS interview, either 1) before the first substantive interview question is asked ("before" condition) or 2) at the end of the interview ("after" condition): "Would you say the respondent's health, in general, is excellent, good, fair, or poor?" This is the version of the SRH item included in the GSS. The random assignment of when the interviewer is asked to rate the respondent's health will occur at the respondent level.
